

**SPECIFICATIONS** 

# Model Nos. 83309, 83314, 83900 **SL-33 INJECTOR** Series "H"

## **MANIFOLD CHART**

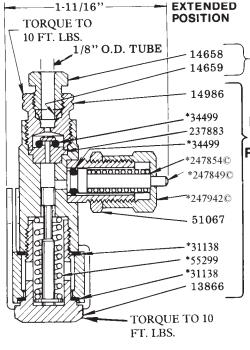

OUTPUT:.....Adjustable from .001 cu. in. to .003 cu. in. OPERATING PRESSURE: 1200 psi to 3500 psi †RECOMMENDED OPERATING PRESSURE: 1500 psi 

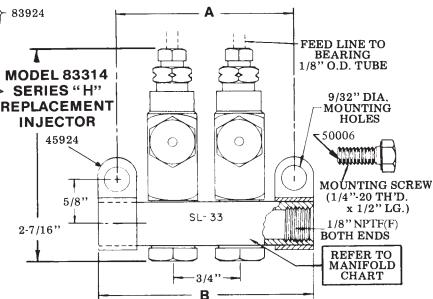

For dispensing oil or grease having a consistency not exceeding NLGI grade No. 2.

May be used in a system with SL-1, SL-11, or SL-33 Injectors. † 2500 psi when used in combination with series SL-1 and/or SL-11 Injectors.

## **OPERATION**

#### **SUPPLYLINE UNDER PRESSURE**

(Normal operating pressure 1500 psi)

Lubricant pressure moves plunger to force lubricant in the discharge chamber through the outlet check valve to the feed line.

Lubricant from supply line charges the measuring chamber.

#### SUPPLYLINEVENTED

(Vent pressure 200 psi maximum)

Plunger returns to normal position after supply line is vented, connecting measuring chamber to the discharge chamber. Flow from feed line is blocked by the outlet check valve.

Lubricant is automatically transferred from measuring chamber to discharge chamber.

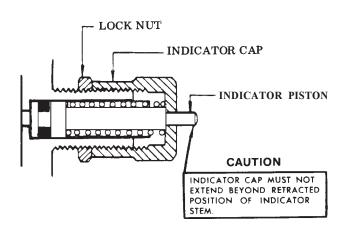

## INJECTOR ADJUSTMENT

Injector output is controlled by the position of the indicator cap which limits the travel of the packing retainer.

With the indicator cap hand tightened against its stop, the lubricant output is decreased to a minimum.

Retracting the indicator cap two full turns permits a maximum of .003 cu. in. to be dispensed. Use the graduations on the cap as an aid in setting the indicator.

When the injector has been adjusted for the proper lubricant output, the lock nut is tightened against the face of the indicator cap.
