DESCRIPTION

The chassis lube pump is electrically operated and used in a progressive type centralized lubrication system. The pump consists of a pump housing, electric gear motor, a timer and a plastic reservoir with stirring paddle. The high operating pressure allows the pump to supply lubricant up to NLGI #2 grease.

MOUNTING THE PUMP

Select an easily accessible place of installation which allows access to the timer and lubricant reservoir filler fitting. The pump must be mounted vertically on an even surface by means of three bolts.

TO FILL RESERVOIR

Fill the reservoir through the grease fitting located at the base of the reservoir, using a hand operated grease pump. Refill reservoir when grease reaches "MIN" mark located on the reservoir. Fill the reservoir up to the "MAX" mark located on the reservoir.

TO PRIME SYSTEM

Pump & Supply Line: After reservoir has been filled with recommended lubricant, loosen the supply line fitting. Operate the pump until lubricant flows from outlet, then tighten fitting.

Feed Lines: Pre-fill each feed line with lubricant before connecting to outlet of divider valve and bearing.

REMOTE MANUAL LUBE PUSHBUTTON

If a remote manual lube pushbutton is required, order a 246322 Manual Lube Kit (consisting of a 32 ft. cord and plug) and:

for a 12 volt pump, order
241419 - Lighted Manual Lube Switch

for a 24 volt pump, order
241484 - Lighted Manual Lube Switch

IMPORTANT:

When using a Model 94412 or 94424 to replace an old style 103 pump with remote manual lube switch, only the 246322 Manual Lube Kit is required.

The wiring for the remote light used on the 103 pump must be changed for the new Models 94412 and 94424. The existing wire that connects the light to the Battery (-) must be disconnected. Reconnect it to the Battery (+).

TIMER OPERATION

The Off timer begins accumulating time when the ignition switch closes. When the Off timer reaches the preset value, the pump will turn on. The pump remains activated for the period of time that is preset on the On timer.

When the ignition switch opens, the Off timer will retain its accumulated time for a period of five days. When the ignition switch closes during the five dayperiod, the Off timer will resume timing from the accumulated time it reached prior to the ignition switch opening. If ignition switch is not closed before the end of five day period, timer will begin with an On period.

Remove Sealing Plug (Item 22) to access manual lube switch, timer adjustments or to view the system LED's.

1. The LED marked "battery" lights when power is applied to the PC board.
2. The LED marked "motor" lights when pumping lubricant.
3. Depressing pushbutton for 2 seconds will initiate a manual lube event.
4. Off time rotary switch. Can be adjusted to 15 values (see chart below).
5. On time rotary switch. Can be adjusted to 15 values (see chart below).

IMPORTANT: Do Not use the Zero position located on the Off time and On time switches.
